

TREES AND PLANTS THAT SHOULD NOT BE REMOVED OR TOPPED

We have a 35+ year old subdivision and most of our trees and other plants were here before many of you moved in - they are part of our character.

The following trees and plants should not be topped or removed as it would destroy their aesthetics:

- Palms
- Saguaros
- Italian Cypress
- Ocotillos
- Yuccas

There are other species that can be pruned by a qualified arborist, including Mesquites and Acacias. Please contact the Maintenance Committee if you would like to have a tree within the common area pruned. The Maintenance Committee will coordinate the work with the arborist and the homeowner will be required to pay for the work.

Exceptions will be made for any tree or plant interfering with the structural integrity of a homeowner's property.
